

## **Exhibit CS-INFO-TOWN-3**

### *Slope Calculation*

Elevation 1 =  $y_1$  = 673 feet

Elevation 2 =  $y_2$  = 738 feet

Distance between  $y_1$  and  $y_2$  =  $x$  = 824 feet

Slope =  $m = (y_2 - y_1) / x$   
 $m = (738 - 673) / 824$   
 $m = 65 / 824$   
 $m = 0.0789$   
 $m = 7.89\%$
