

Exhibit CS-SR-3

Visualization of Re-attachment Area

The area marked in yellow is the 9.64-acre area of trees proposed to be cleared for the Chelsea Solar Project

The area marked in blue is the re-attachment area for the trees proposed to be cleared for the Chelsea Solar Project (for winds from the South, West, and Southwest)

Re-attachment distance = height of trees multiplied by up to 5x

In this scenario, trees are assumed to be 50 feet in height and multiplication factor is assumed to be 5x. These are conservative assumptions.

Re-attachment distance = 50 ft. x 5

Re-attachment distance = 250 ft.
