To the Public Utility Commission:

I am writing today urging you to remove the negative solar adder, adding a penny to the current rate, not removing one.

Scientists from around the world continue to sound the alarm bells that climate change is creating unprecedented risk to life around the world. The most recent IPCC report specifically says solar power and other renewable energy have to continue to be supported by governments in order to avoid the worst impacts of climate change. I believe that we have an obligation to swiftly transition to an electric grid powered entirely by local renewable energy. Everyone should be able to choose solar and do their part to address the climate crisis.

I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy.

Please consider the future for our children, grandchildren and generations to come. Let's move forward not backwards! Increase the incentives!

Sincerely,
<Carmen Macchia>
