To the Public Utility Commission:

I oppose this recommendation to drop the value of the solar adder once again. Any Vermonter should be able to take advantage of solar – at home or at their business – and this recommended change would make that harder.

Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. In addition to these state incentive reductions, the federal government has also been dropping its important tax credit. This has all resulted in fewer people taking advantage of solar, and fewer clean energy jobs being created. We need to be creating more programs to help more people take advantage of solar, not the other way around. Please do the right thing.

I urge you to remove the negative solar adder by adding a penny to the program, not removing it as recommended. Give everyday Vermonters a chance to own their own power generation and keep their energy dollars local.

Sincerely,  
Travis Getty  
Bakersfield

To the Public Utility Commission:

I oppose this recommendation to drop the value of the solar adder. Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy. In addition, knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable. It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,  
Carole M McNamee

Dear Public Utility Commission:

Climate action must be a top priority. Please don't cut solar net metering incentives at a moment when we need to deploy more clean energy, faster.

Thank you,

Tim Patterson  
Craftsbury, Vermont

To the Public Utility Commission:

I oppose this recommendation to drop the value of the solar adder. For work, I do Crisis Response and have been doing so for the last 10 years. As a result of climate change, each year, we are seeing more frequent and severe storms and this trend will likely continue. To do our part, we invested in solar and we need to reduce barriers for others to do the same.

Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. To the Public Utility Commission:

I am writing today urging you to hold the solar adder steady.

The clean energy industry currently provides roughly 18,000 people – especially young people – with well paying and skilled jobs. I oppose the recommendation to reduce the adder that would impact these jobs, the businesses that operate here, and the revenue this industry creates for Vermont. Every job is important in our small state. Knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable in my opinion.

It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,

Joanne Rauscher  
Morrisville, vt
