To the Public Utility Commission:

I oppose this recommendation to drop the value of the solar adder. Please think long term, not short term. Why would you make it harder for people to do something that is better for the environment and the climate? Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. These impacts hurt our state and our economy; this is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy. In addition, knowingly changing policy that would lead to continued job loss, hurt our local economy and negatively impact our climate is unacceptable. It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,
Erik Remsen
Middlebury

To the Public Utility Commission:

Please do not reduce the value of the solar adder. We need to do everything possible to fight climate change. Fighting climate change is like fighting a war. Even if solar adder program is not perfect, we must continue it to encourage solar use and fight climate change. Remember that the enemy of the good is the perfect. I oppose this recommendation to drop the value of the solar adder.

Sincerely,
Willard Pope

To the Public Utility Commission:

I am writing today urging you to remove the negative solar adder, adding a penny to the current rate, not removing one.

Scientists from around the world continue to sound the alarm bells that climate change is creating unprecedented risk to life around the world. The most recent IPCC report specifically says solar power and other renewable energy have to continue to be supported by governments in order to avoid the worst impacts of climate change. I believe that we have an obligation to swiftly transition to an electric grid powered entirely by local renewable energy. Everyone should be able to choose solar and do their part to address the climate crisis.

I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy.

Sincerely,
Johna Grim

To the Public Utility Commission:

I am writing today urging you to hold the solar adder steady.

The clean energy industry currently provides roughly 18,000 people – especially young people – with well paying and skilled jobs. I oppose the recommendation to reduce the adder that would impact these jobs, the businesses that operate here, and the revenue this industry creates for Vermont. Every job is important in our small state. Knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable in my opinion.

It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,
Clayton Elliott

Dear Public Utility Commission:

I am writing to oppose the recommendation to drop the value of the solar adder. I believe that any Vermonter should be able to take advantage of solar – at home or at their business – and this recommended change would make that harder.

We went solar in 2015, but year after year, the state of Vermont has continued to make it harder for our friends and neighbors to go solar, not easier as it should be.

In addition to these state incentive reductions, the federal government has also been dropping its important tax credit. This has all resulted in fewer people taking advantage of solar, and fewer clean energy jobs being created.

I urge you to listen to Vermonters and remove the negative solar adder by adding a penny to the program, not removing it. Give everyday Vermonters a chance to own their own power generation and keep their energy dollars local.

Thank you for the opportunity to comment.

Arthur Hamlin
