To the Public Utility Commission:

I oppose this recommendation to drop the value of the solar adder. Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy. In addition, knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable. It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,

Stephen Tucker

Bradford, VT
