To the Public Utility Commission:

I am writing today urging you to not reduce the Solar Adder – AGAIN!

The clean energy industry currently provides roughly 18,000 people – especially young people – with well-paying and skilled jobs. I oppose the recommendation to reduce the adder that would impact these jobs, the businesses that operate here, and the revenue this industry creates for Vermont. Every job is important in our small state. Knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable in my opinion.

It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,
Jim Minichiello
Peacham

To the Public Utility Commission: I oppose this recommendation to drop the value of the solar adder once again. Any Vermonter should be able to take advantage of solar %2 at home or at their business %2 and this recommended change would make that harder. Year after year, the state of Vermont has continued to make it harder for Vermonters to go solar, not easier as it should be. In addition to these state incentive reductions, the federal government has also been dropping its important tax credit. This has all resulted in fewer people taking advantage of solar, and fewer clean energy jobs being created. We need to be creating more programs to help more people take advantage of solar, not the other way around. Please do the right thing. I urge you to remove the negative solar adder by adding a penny to the program, not removing it as recommended. Give everyday Vermonters a chance to own their own power generation and keep their energy dollars local. Sincerely,
Lindsey Wild
Underhill, VT

To the Public Utility Commission:

I bought solar panels and back up batteries last year and I am so glad I was able to afford them. I no longer have power outages and have an increased sense of security in my home. I hope you will increase incentives and affordability for solar in Vermont, or at least, not decrease incentive to go solar.

I am writing today urging you to hold the solar adder steady.

The clean energy industry currently provides roughly 18,000 people – especially young people – with well paying and skilled jobs. I oppose the recommendation to reduce the adder that would impact these jobs, the businesses that operate here, and the revenue this industry creates for Vermont. Every job is important in our small state. Knowingly changing policy that would lead to continued job loss and hurt our local economy is unacceptable in my opinion.

It is time to move into the 21st century and acknowledge that the utility grid needs to adapt to new technologies and support this growing clean energy economy.

Sincerely,

To the Public Utility Commission:

I am writing today urging you to remove the negative solar adder, adding a penny to the current rate, not removing one.

Scientists from around the world continue to sound the alarm bells that climate change is creating unprecedented risk to life around the world. The most recent IPCC report specifically says solar power and other renewable energy have to continue to be supported by governments in order to avoid the worst impacts of climate change. I believe that we have an obligation to swiftly transition to an electric grid powered entirely by local renewable energy. Everyone should be able to choose solar and do their part to address the climate crisis.

I am already seeing the impacts of climate change – less snow, more rain, and more extreme weather events impacting communities around the state and the world. This is not the time for slow action. We need to accelerate our electric grid's transition to 100% renewable energy.

Sincerely,
Wayne Suddaby

The planet is in peril and we need to think BIG! More people will come to Vermont to live and work if we lead the way here.

I have personally invested a lot of money in my solar system for our home to do my part as a responsible citizen of earth. There has never been a more urgent time to encourage solar than right now.

Please do the right thing!

Sincerely,

Sue LaFleche,

Williamstown

Do the right thing Folks ! Please !

Help everyone in VT
use renewables
and locally generated -solar -
small wind -hydro - methane generators. & Get on it Now
