07/03/2023	GOODKIND, STEVEN [PUBCOM]	The McNeil Generating Facility operates at an efficiency of about 25%. The wood burning plant is far more efficient at generating CO ₂ than it is electricity. It is the largest single source of CO ₂ production in Vermont. With the addition of the steam pipe, its' efficiency may increase slightly and so will its' CO ₂ emissions. Any other readily available fuel would be more efficient and produce less CO ₂ than what is being proposed by BED (including coal). That is how bad this project is!	Filed
