07/17/2023	Bock, Catherine [PUBCOM]	So called biogenic CO2 emissions from wood or liquid biofuels must be counted at the place of emission even though "...the CO2 will eventually be re-sequestered through regrowth..." We don't have time to wait for regrowth as is all too obvious from the daily weather catastrophes happening across the earth. The warming effect starts as soon as the CO2 is released. Please include accurate accounting of CO2 from biogenic sources in the CHS.	Filed
