

Q.DPS.GMP.2-115. On page four of Mr. Burke's prefiled direct testimony, Mr. Burke states that the ZOI is a plan "that consists of three major components that work together to create an energy system by 2030...." Please provide the total estimated cost of the ZOI through 2030.

A.DPS.GMP.2-115.

Please refer to responses A.DPS.GMP.2-2 and 2-21 above. We have not estimated the total value of the investments required to deliver ZOI through 2030 in detail as we have not mapped out defined projects across our entire system. Technology is also rapidly changing, especially around the energy storage component of ZOI. As the solutions we implement will evolve over time, what we know today and estimates based on what we have today for the work needed will change over the course of the next years. This is one of the main drivers of a phased approach. We have offered when asked an overall amount on the order of \$1.5B while making clear this is a phased approach without specific estimates beyond the Petition here for the reasons stated elsewhere, including technology and innovations.
