Subject

Lyndonville Biomass Plant

Message

As a person who lives in the CT River Valley air space and an elder who lives with a respiratory challenge, and as someone who depends on firewood for heat, I am asking you to please to engage in your regular permitting process, including public input and participation. Vermont forests are being destroyed by this industry, forests that Vermonters have depended on for centuries. The industry eats up trees so fast, the forests could never recover in our lifetimes. Air pollution from these plants is worse than coal. I know, I can't drive within five miles of any biomass Plant without going into respiratory arrest. Not only is it bad for the environment, but it's making firewood scarce and astronomically expensive for home owners. It's easier and more lucrative to cut and chip than to cut and split and deliver small loads to homes. Please allow the public to be involved in this important decision. Thank you
