**Re: Case Number 21-1054-NM
Installer Comments on Aesthetics Mitigation Plan**

SunCommon would like to comment on the Aesthetics Mitigation Plan put forth by rbTechnologies (the “Applicant”) and SunCommon (the “Installer”) during the filing process for this CPG, and confirm that the project is in compliance with the tree planting requirements.

It was the Applicant and Installer’s intention to plant trees north of the proposed PV solar array to comply with the requests of the East Montpelier Planning Commission. This commitment was fulfilled at the time of installation. Please note that all Exhibits referred to below were taken on-site on 06/11/25.

Please refer to upload “Aesthetics Exhibit 1”. The photo was taken from on the northern abutting property looking south southeast at the array. Now please refer to “Aesthetics Exhibit 2”. This photo was taken from the northwest corner of the property line looking southeast at the array.

These Exhibits demonstrate that trees were indeed planted north of the array.

The photographs in Aesthetic Exhibits 1 and 2 were taken four years after the initial filing, demonstrating that the Applicant and Installer is upholding their commitment to the East Montpelier Planning Commission to maintain the screening plantings during the lifetime of the array.

Sincerely,

Michael McCarthy, Director of Sales
