In my mail today, came a copy of a notice that GMP is filing for an aDJUSTMENT, UPWARD, in base rate power to the tune of 7.35%, effective on 1 October 2025. This proposal is to go for a year, if approved.

I am on record via this email, of massive opposition to this proposal.

So for discussion purposes let's say this is approved . There is no info, I guess on what the plan for next year would be.

This is the problem, because 7.35% now and let's say 3.3 for next year, that is year +year well over 10%. Vermonters cannot live with such a hit.

Who else in the workforce, earning a weekly paycheck can afford such action as the above?

I say send them back to the drawing board, and bring something back that is more in tune with reality for the folks paying the bill. A 3.5% or 4.0% at the most would accommodate much easier a 3.5% next year and I think we have to plan in those figures/ranges.

This is all a result of the E Greenies spending so much money on the run up to today; and after the shi-ysters were paid off, the predictables back then are coming home to roost. All courtesy of the VT ratepayers, because you can bet that the others will follow along with some kind of plus regardless. I am not in favor of the end result being zero %, I just think that GMP needs to be realistic, and live in the confines we all are dealing with..

There is Hope;
