To the Vermont Public Utilities Commission,

I am a land owner and resident close to the proposed radio tower. I am not in favor of placing a tower here in Tinmouth. It does not enhance the beauty or value of our community. It is not an aesthetic attribution to the **town plan** nor allowed. Placing it in the bottom of a valley makes no sense and is in a protected zone.

There are some residents right next to this tower who will have their health severely compromised by the radio waves. How can the State of Vermont allow the health of their residents be negatively affected by a conscious decision on their part? This not in the best interest of the citizens here.

We did not ask for this to be built. Who benefits from this tower? We do not. It only benefits the speculating applicants. How long will it be before this technology becomes obsolete anyway. This whole proposal seems like someone is just making a shot in the dark to see what will happen. Take the idea somewhere else.

Respectfully submitted,

Ken Krantz
