RE: 26-0574-PET

To Whom It May Concern,

We are writing to express our support for the proposed communication tower on Bordoville Road in Enosburg. As a neighboring fire department that provides mutual aid in this region, we have firsthand experience with the communication challenges that can arise in rural emergency response.

Reliable communication is essential when multiple departments are coordinating during incidents such as structure fires, wildland responses, and medical emergencies. Gaps in coverage can delay critical information, hinder coordination, and ultimately impact the effectiveness and safety of our crews. A new communication tower would significantly improve interoperability and ensure that all responding agencies can communicate clearly and efficiently.

This project will not only benefit the local volunteer fire departments but will strengthen the overall emergency response network for fire, rescue and law enforcement agencies. Improved communication enhances responder safety, shortens response times, and leads to better outcomes for the communities we serve.

We strongly encourage approval of this important project.

Respectfully,

Fairfield Volunteer Fire Department

Tim Corey, Chief
