To the VT Public Utility Commission,

I am a current homeowner in St. Albans with Solar Panels. When we bought our home 9 years ago we did several things to reduce our energy costs and/or carbon footprint. As homeowners it has been important to us to help our community with green energy.

Since we've put in our panels we've had numerous changes in our life and within our net-metering. We've expanded our family, I now work from home and VT has made several changes to the net metering policies.

I can't help but feel a bit outraged and yet another change and not in our favor. We are still paying off the solar panels we bought (we are not using a rental program) and our net metering credits are the lowest we've ever had.

I strongly urge you to continue the current rate of net metering credits if not increase them. Those using solar panels and those considering putting them in should be encouraged and supported. Every amount of green energy is needed as our entire world is in an eco crisis.

Furthermore, I'd also encourage the state to implement more green energy into their buildings. Put solar panels on state property and buildings.

Thank you for your time.

All the best,
~Jennifer Martin
