To whom it may concern;

Previously I have been writing legislative representatives in the town of Essex regarding Both the GWSA and the CHS. The projections I'm hearing are that the cost could be in the **Billions of dollars** to satisfy the demands of these bills. This action if implemented will bankrupt the state . Additionally, the established timeline and CO2 compliance reduction levels are unrealistic and the state will be subject to lawsuits.

Since the legislature has the power to scrap both of these bills that is what should happen in January. The legislature should be putting Vermonters' interests forward. This is after all their charge as being our representatives in Government. CO2 is not the problem!!! For survival the earth needs CO2. Climate Change used To be called Global Warming then Global Cooling when that was popular. The Climate changes every day as observed here and everywhere on this planet. This herculean proposal by some legislators in Vermont to reduce CO2 is not going to accomplish anything in terms of making an Impact on Carbon reduction. We have an abundance of trees in this state that take in CO2 and in exchange give us O2. We don't need this legislation. I don't see any relation between CO2 reduction and a stable or or predictable climate.

We need practical common sense legislation to move Vt in the right direction.
