For your consideration,

Puc needs to determine what the clean heat fee will be for the fuel dealers on a per gallon basis, this will help keep it consistent and easy to manage. Individuals/ companies that will be doing installations of heating systems should get clean heat credits applied to their accounts. New high efficiency equipment runs cleaner and uses less fuel and as the transition to biofuels continues this becomes a renewable resource more than a fossil fuel. These bio fuels as well as propane and the equipment being installed currently should all qualify for clean heat credits. We all want to do our part but at the same time be responsible for the people of the state that these current projected numbers will cripple. The Vermonter is struggling enough to make it. If they have to pay extreme amounts to heat their homes then there will be no Vermonters left in the state. I have lived and worked in this state my entire life. I raised my children here. My parents struggle to keep their home heated currently, my children can't find affordable housing, the added expense to keep their homes warm will be devastating. We have been loosing parts of what makes Vermont our home for years. These new standards will push us all out of the state we love. Please consider all choices made into the future of a state I may not be able to call home.

Warm regards

Tucker Wilkinson
